

1.

Question 1

In the video, we used a query function to see how spread out the values in the "Sale Amount" field are. What function did we use?

1 / 1 point

Standard Deviation

Maximum Value

Count

Average

ANSWER: (A) Standard Deviation

Correct

The Standard Deviation function helps us see how far out our values are in a certain numeric column.

2.

Question 2

_____ helps you assess if the size of a workload is slowing down the system.

1 / 1 point

Job-level Runtime Monitoring

Monitoring the amount of data being processed through a data pipeline

Database Monitoring

Monitoring the performance of queries

ANSWER: (B) Monitoring the amount of data being processed through a data pipeline

Correct

Monitoring the quantum of data being processed in a data pipeline at a time helps you assess if the size of the workload is slowing down the system.
