1.

Question 1
What is the type of the following: **0**
1 / 1 point
Int
Float

ANSWER: (A)Int

Correct
Correct, as there is no decimal the number is of type int. You can also use the type function to verify your results.

2.

Question 2
What is the type of the following number: **3.12323**
1 / 1 point
Float
Int

ANSWER: (A)Float

Correct
Correct, as there is a decimal the number is of type float. You can also use the type function to verify your results.

3.

Question 3
What is the result of the following: **int(3.99**)
1 / 1 point
3
3.99

ANSWER: (A)3
Correct
Correct. In Python, if you cast a float to an integer, the conversion truncates towards zero, i.e.you just get rid of the numbers after the decimal place. So for 3.99 you just get rid of the ".99" leaving 3
