1.
Question 1
What is the result of the following operation: 11//2
1 / 1 point
5.5
5

ANSWER: (B)5

Correct
this is correct, the symbol // means integer value. Therefore you must round the result down.

2.
Question 2
What is the value of x after the following is run:

x=4

x=x/2
1 / 1 point
2.0
4.0

ANSWER: (A)2.0

Correct
Correct: the value **x=x/2**changes the value of **x**, if x is assigned to its self. It's helpful to replace the value of x with its current value in this case 4 or x=4/2. We can also see that the result is a float.
